

Accelerating Intelligent User Acceptance Testing

CHALLENGE

The client relied on manual User Acceptance Testing (UAT) across multiple web applications, making releases slow and resource-intensive. They needed a scalable automation approach to improve test coverage, reduce effort, and accelerate software delivery.

INTELLIGENT UAT AUTOMATION PLATFORM

Built a Selenium-based UAT automation framework with reusable test assets, standardized test data, and shift-left validation to automate critical business scenarios, accelerating testing and improving release readiness.

SOLVED FOR A GLOBAL SCALE

Enabled enterprise-wide UAT automation across multiple customer-facing applications, reducing manual effort, accelerating release cycles, and delivering higher software quality with zero production defects.

IMPACT

Direct Benefits

30%

Reduction in UAT cycle time

60-70%

Reduction in regression testing effort

0

Production defects after release
